

CSoft Business Software

RFID Technology

Overview

There is a new technology on the market called RFID, which stands for Radio Frequency Identification.

The technology uses radio waves to identify one or multiple objects.

We are now looking at a completely different way of dealing with Stock, Handling of timesheets, Dealing with Security

Features

Examples of how the technology can be used in a day to day business environment are as follows:

- ✓ One click Stock takes.
- ✓ Monitor movement of stock as it moves through the Production Cycle.
- ✓ Tag high value items for easier tracking.
- ✓ Tag boxes or items so that when they are stored they can be located at an instance.
- ✓ Asset Management now becomes a breeze. Locate and confirm any asset.
- ✓ Personal Management – can be used to identify who checks in or who checks out.
- ✓ Monitor when staff arrive at work.
- ✓ Monitor who comes into the Gym.
- ✓ Monitor a multiple of security access points.
- ✓ Protect high value items.

And of course integrated into Csoft to make your life even easier with the help of associated businesses.

Call to discuss pricing as it will depend on the level of complexity, number of items etc.
