Company Profile

With our Head Office in Adelaide, and a Branch in Auckland New Zealand, CSB Management Systems provides superior technical expertise, consultancy and support for our fully integrated Business Software (CSoft) servicing both domestic and international sectors. Our goal is to be one of preferred software solutionists for medium to large businesses in Australasia.

We have been providing Customised Business Software solutions to businesses for the last 27 years. With expertise in customised software development, CSB Management Systems is involved in every stage upon client approval through to when the software is initiated in a live setting.

Our extensive skills encompass all aspects of implementation and operation, including business requirements definition, development of functional specifications, system design and customising our software to fit specific client needs.

Our experience in working with companies from various industries certainly makes CSoft a choice when looking at setting up your business software.

Core Competencies

We strive to exceed the expectations of every client by offering outstanding customer service, increased flexibility, and greater value, thus optimizing system functionality and improving operation efficiency.

Our experience and expertise covers the following areas:

- Financial & Accounting Systems.
- Serial Number Tracking Order/Invoice Systems.
- Sales Order Systems with a Full Web Interface.
- Job Costing & Estimation Systems for the Construction Industry.
- Manufacturing Systems including RV Manufacture.
- Service Industry Systems.
- Interfaces with various WEB Based systems.
- Database Management Systems.
- Multi-Language Systems.
- Customer Support & Consultancy.

Differentiators

- We customise to cater for specific client needs.
- We can make a difference in the way your company performs.
- We can provide solutions to fit your requirements.
- We are competitively priced.
- Our system includes all the core accounting and related features.
- Fully integrated system, no need for multiple packages.
- Our systems are robust.
- Our support and backup is second to none.
- All setups are taken care of.

Technologies

We principally develop in OpenInsight* as:

- It is truly multi-user.
- It was designed specifically for commercial applications.
- It is easy to develop with and modify applications.
- It can be used by people who are not trained in data processing.
- Retrieval is based on English sentences.
- It is flexible.
- It is portable.

OpenInsight* is a repository-based applications development environment that enables development teams collaboratively to design, develop, deploy and scale high-performance business solutions. OpenInsight's complete tool set (including a Form Designer, Editor/Debugger, UI Workspace, XML Workspace and more), advanced BASIC+ scripting language and powerful client/server development tools combine to deliver a complete environment for deploying and evolving network applications. OpenInsight is delivered with a flexible MultiValued, variable length, filing system, and has the ability to use SQL Server, Oracle, Universe/UniData, D3 or any ODBC compliant data back-end. Delivered with both XML and Web-enabled tools, OpenInsight is a tremendously powerful development tool for Windows-based applications.

OpenInsight for Web (O4W)** is a flexible and powerful web development toolkit included with OpenInsight 9.2 to the current version 10. The OpenInsight for Web (O4W) Development Toolkit makes it possible for OpenInsight developers with limited or no HTML/XML/JavaScript experience to develop feature rich web pages. O4W is designed to work the way OpenInsight developers think, taking advantage of the skills and knowledge they already have. While users with more web development experience can use O4W's advanced features, all developers can create modern web applications (using JavaScript, XHTML, and AJAX) through O4W's APIs.

Company History

With a vision of providing a high standard accounting system that is robust, easy to maintain and flexible enough to change to suit the individual needs of clients, CSoft was born. The base system was written between 1989 and 1991. Our first basic Debtors system was installed in May 1991.

The first version of the system was designed and written by Gerry Van Niekerk using ideas and recommendations from accountants and his experience as a Chartered Accountant.

In 1997, we converted the first customer to our Windows based system. 2002 saw the release of CSoft version 4.0, a 32-bit version with improved handling of larger volumes of data. Our 64bit version 10 is about to be released early 2019.

All new users will receive the new version 10, or be upgraded 'free' upon release of same.

Currently, we have a number of larger businesses using CSoft throughout New Zealand, Australia and some in Asia. We mainly provide systems for medium to larger clients, as well as smaller companies with specific needs that require customisations to cater for their needs.

Company Principal

Gerry Van Niekerk

Gerry graduated with a B.Comm (ACCT) degree from the University of Pretoria and qualified as a Chartered Accountant in Pretoria. After initially serving four years of articles with a C.A firm and working as a senior for another 4 years he became a partner in a medium sized partnership after qualifying as a CA, and was responsible for all computer operations.

In 1986, he emigrated to New Zealand through the international firm of Peat Marwick. Although a qualified accountant, over the last twenty 30 years he has developed an extensive understanding of the OpenInsight Database and is now able to assist in providing a database product of high quality and with great capabilities.

He now resides in Adelaide, Australia where the Australian and Asian sites are looked after.
